EDMUND G. BROWN JR.
Governor
State of California

RONALD B. ROBIE
Director
Department of Water Resources

STATE OF CALIFORNIA
THE RESOURCES AGENCY
DEPARTMENT OF WATER RESOURCES
DIVISION 3 OF WATER CODE

FOREWORD

Prior to 1929, California exercised limited supervision over dams in the State, but less than half of them were included. In addition, a few dams were under federal supervision. The catastrophic failure in 1928 of St. Francis Dam in Southern California resulted in a major disaster which prompted the initial dam safety legislation which became effective on August 14, 1929. The subsequent failure of Baldwin Hills in 1963 was followed by additional legislation which took effect on September 17, 1965, which provides for jurisdiction over offstream storage facilities and over the entire reservoir basin. Dam safety supervision is specified in Division 3 of the Water Code which gives jurisdiction to the California Department of Water Resources. Jurisdiction pertains to dams 7.6 or more metres (25 feet) high which impound more than 18,500 cubic metres (15 acre-feet) of water and dams more than 1.8 metres (6 feet) high which impound 61,700 or more cubic metres (50 acre-feet). Federal dams are exempt from State supervision.

Following the San Fernando earthquake of February 9, 1971, the Department considered extensively dam safety because of earthquake effects. This earthquake event resulted in increased public seismic safety consciousness and it stimulated advances in the state-of-the-art in dynamic analysis for dams. Consequently, there has been a determined effort to reconsider the seismic safety of all dams in California.

Provisions of the Dam Safety Act are administered by the Department's Division of Safety of Dams. The Division's engineers and geologists review plans and specifications for construction of new dams, and for enlargement, alteration, repair, or removal of existing dams. Proposed sites and construction materials are investigated. Conditions disclosed during site investigations which may require design changes are identified. Formal approval is granted before the owner may proceed with his work program. During construction checks are made for compliance with approved plans and specifications. All foundations are approved before they are covered. During operation dams are periodically examined to evaluate performance to assure that hazardous conditions do not exist. Abatement of dams built in violation of the law is required.

Before operation is commenced a Certificate of Approval is issued which attests to the safety of the dam and reservoir. It constitutes a permit for the use of the dam. Certificates may contain restrictive conditions and they may be amended or revoked.

The Department, in administering Division 3 of the Water Code, is required to comply with the provisions of the California Environmental Quality Act of 1970. All formal approval actions are preceded by appropriate environmental documentation.

On July 1, 1976, there were 1,105 dams and reservoirs subject to State jurisdiction. The combined storage capacity of the reservoirs was nearly 26 billion cubic metres (21 million acre-feet) of water. Bulletins of the No. 17 series, "Dams Within Jurisdiction of the State of California", tabulate various statistical data on all dams in the State, including an appendix of federal projects.

Bulletin No. 17-76 utilizes for the first time the International System of Units (SI) and the English measurements with the prime units being the SI. Also there is a cross-reference alphabetical tabulation of reservoir names if the reservoir name in common use is different than the dam name.

Data relating to dams under State jurisdiction were obtained from applications and plans submitted by owners in compliance with statutes and regulations. Field surveys and supplementary data from owners provided additional data.

The Department solicits from Bulletin users their suggestions for additions or corrections. These should be sent to:

Division of Safety of Dams
Department of Water Resources
P. O. Box 388
Sacramento, CA 95802

The Department has available, in pamphlet form, "Statutes and Regulations Pertaining to Supervision of Dams and Reservoirs". It will be sent without charge to those who express an interest.

Ronald B. Robie, Director

EXPLANATION OF TABULATED DATA

Several items have been added to Bulletin 17-76. To avoid confusion, the lakes and reservoirs which have names other than the dams that retain them have been listed alphabetically. All units of measure are given in the International System and the English System. The front cover has a conversion table that is more comprehensive than the units used in the data. A graph is provided, opposite the Foreword, which depicts the parameters of Division 3 of the Water Code in both systems.

On April 1, 1976, there were 1,105 dams and reservoirs subject to State jurisdiction. The estimated first costs of the dams exceeded one billion dollars, and combined storage capacity of the reservoirs exceeded 24 million $m^3 \times 10^3$ (or 20 million acre-feet). The dams are categorized into 12 basic types. Bulletins of the No. 17 series, "Dams Within Jurisdiction of the State of California", supply the name, location, type, size, age, and ownership of such dams, the maximum water storage elevation, and their area of tributary drainage.

An appendix lists dams in California owned or operated by federal agencies. The cooperation of federal agencies in supplying data related to their dams is much appreciated.

Column headings introduce the data as indicated below.

NAME OF DAM -- as assigned by owner on original application, or as changed by owner in subsequent written correspondence of the Department of Water Resources.

DAM NUMBER -- as assigned by the Department of Water Resources.

NAME OF OWNER -- as appears on application.

COUNTY -- in which dam is located. Dams located in more than one county are listed under the county of alphabetical precedence.

STREAM -- on which dam is located as named by the owner on original application or as revised to conform with U.S.G.S. topographic maps.

LOCATION -- section, township, range, and base line and/or meridian, as used in "The System of Rectangular Surveys".

TYPE -- of main dam only.

UNIT -- the unit used for dimensions of each item, first in the International System (S.I.) or metric, then the equivalent unit in the English System.

STORAGE CAPACITY -- cubic metres $\times 10^3$, then acre-feet, including dead storage.

DRAINAGE AREA -- in square kilometres and square miles, drainage areas less than .38 kilometres are carried as .40 kilometres and .10 square miles.

RESERVOIR AREA -- in square hectometres or acres at spillway crest elevation or, if headwater controls are used, at the maximum water storage elevation.

ELEVATION OF CREST -- the nearest .1 metre and the nearest foot (U.S.G.S. datum, when available; otherwise approximate U.S.G.S. datum).

CREST LENGTH -- of the main dam (excluding auxiliary dams) in .1 metres and in feet.

HEIGHT -- in .1 metres and feet from dam crest elevation (excluding any parapet) to the lowest elevation of the outside limit of the dam.

PERMANENT SPILLWAY -- vertical distance in metres and feet from the dam crest to the permanent spillway crest.

MAXIMUM OPERATING LEVEL -- where spillway crest controls are used, the vertical distance in metres and feet from the dam crest to the maximum possible water storage elevation (top of gates, flashboards, etc.).

CREST WIDTH -- in metres and feet to the axis at the narrowest point.

DAM VOLUME -- in cubic metres and cubic yards of the principal material used for both main and auxiliary dams.

YEAR COMPLETED -- date the original construction was completed.
